

Lightroom 3 Export to PDF Comparisons

This file contains two sets of four images, exported from two different photographs as PDF files from the Slideshow module in Lightroom 3.

For each image, four different Quality settings were used in the 'Export Slideshow to PDF' dialogue. These were 25, 50, 75 and 100. Each image shows the Quality setting applied. Width and Height were 1024 and 768 pixels respectively (optimum for iPad).

Those at setting 25 show signs of image degradation, especially in large areas of even tone (the 2nd image). Those at settings 50, 75, and 100 are acceptable and show little difference when viewed on an iPad screen.
